Report on One-Day Workshop on "Play with Gemini CLI Edition"

This report summarizes the organization, execution, and outcomes of the "Play with Gemini CLI Edition" workshop. The event was successfully organized and delivered by the [Your GSA Chapter Name] GSA Coordinators on [Date of Workshop] with the objective of introducing participants to the power and practicality of Google's Gemini models through a command-line interface (CLI). The workshop provided hands-on experience in leveraging generative AI for productivity and development tasks, successfully achieving high participant engagement and positive feedback.

Workshop details

Parameter : Details

Workshop Title Play with gemini CLI edition

Organizing Body GSA co-ordinators ATMECE

Abhinandan

Lakshmi M

Date 10/12/2025

Time 2pm – 4:45pm

Venue Civil seminar hall [C-108]

Target Audience Students from dept of Computer Science

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

and Engineering and Allied Branches.

Total Participants 25

Objectives

The primary goals of the "Play with Gemini CLI Edition" workshop were:

- * Introduction: To familiarize participants with the core concepts of the Gemini family of AI models and the capabilities of generative AI.
- * Practical Skills: To provide hands-on experience with the official Gemini Command Line Interface (CLI) tool.
- * Application: To demonstrate practical, real-world use cases for the Gemini CLI in scripting, coding, debugging, and general productivity tasks.

Workshop Agenda and Content

The workshop was structured into the following key phases:

Introduction to Generative AI and Gemini

- * Overview of Large Language Models (LLMs) and their significance.
- * Introduction to the Gemini family: Nano, Pro, and Ultra.
- * Discussion on the benefits of using a CLI for developers (speed, scripting, automation).

Setting up the CLI Environment (Hands-on)

- * Guidance on installing the official Gemini CLI tool.
- * The crucial step of obtaining and securely setting up the API Key as an environment variable.
- * Verification of the installation with a simple test query.

Core CLI Commands and Use Cases (Hands-on)

- * Basic Interaction: Using the gemini generate command for simple text prompts.
- * Multimodal: Demonstration of image captioning and description using gemini generate --

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

image .

- * Coding & Debugging: Using the CLI to generate code snippets, explain complex functions, and suggest fixes for errors.
- * Chat Mode: Exploring the continuous conversation feature using the gemini chat command for maintaining context.

Advanced Usage & Tips

- * Integration with shell scripts for advanced automation.
- * Discussing prompt engineering basics for better results.

Execution and Delivery

The workshop was delivered entirely by the GSA Coordinators, showcasing their technical expertise and leadership.

- * Delivery Methodology: The session followed a "see one, do one" approach, where the coordinators first demonstrated a command, and then guided the participants through executing it on their own machines.
- * Resources Provided: A detailed presentation deck and a structured lab sheet with all necessary commands and setup instructions were shared with every participant.
- * Interactive Sessions: Dedicated Q&A breaks and one-on-one assistance ensured that no participant was left behind due to setup issues or technical difficulties.

Outcomes and Feedback

Key Outcomes

- * Skill Acquisition: [Percentage]% of participants successfully installed the Gemini CLI and ran their first multimodal query by the end of the session.
- * Engagement: The high number of specific, technical questions from the audience demonstrated a deep level of engagement and interest in the practical application of AI.

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

* Future Impact: The workshop successfully laid the groundwork for attendees to explore more advanced Gemini features and API integration in their future projects.

Participant Feedback (Based on a quick survey)

* [Quote 1 from a participant, e.g., "The hands-on approach made the CLI feel approachable and powerful."]

* [Quote 2 from a participant, e.g., "I never realized how quickly I could use AI directly in my terminal for coding tasks."]

Conclusion and Recommendations

The "Play with Gemini CLI Edition" workshop was a resounding success, achieving all its stated objectives and providing participants with valuable, in-demand skills in generative AI. The commitment and technical proficiency of the GSA Coordinators were instrumental in the smooth execution of the event.

Recommendations for Future Workshops:

* Project-Based Learning: Organize a follow-up session focused on building a small, end-to-end

project that integrates the Gemini API beyond the CLI (e.g., a simple Python bot).

* Dedicated Troubleshooting: Allocate the first 15 minutes of future workshops solely to environment setup troubleshooting to maximize hands-on time.

* Advanced Prompting: Dedicate a full module to advanced prompt engineering techniques .
